01 THE MARKET

Brazil imports US$49 billion in electronics. It manufactures almost none of it.

The market does not need to be created. It needs to be captured.

US$ 49B

Electronics imported into Brazil in a single year

45%

Of those imports already come from China

US$ 23.5B

Semiconductors, passives, connectors and boards

THIS IS THE MARKET WE SELL INTO

US$ 6B

Of that total, semiconductors alone. The largest single imported line.

85% of all chips consumed in Brazil are imported. Brazil buys the components. It does not make them.

02 THE BUYERS

The buyers are already named, mapped and reachable.

These are the accounts our application engineers visit in the field. Not a market study. A call list.

EMS and contract manufacturers

High-volume assemblers in Manaus, São Paulo and Santa Catarina. They buy components by the reel and qualify second sources continuously.

Flex · Jabil · Foxconn · Sanmina · Pegatron · Wistron

Plus the tier below them: regional assemblers running SMT lines for industrial and security electronics.

Brazilian OEMs and brands

They design their own boards in Brazil, so the component decision is made here. This is where a local rep wins designs.

Positivo · Intelbras · Multilaser · Semp TCL · WEG

Plus payment terminals, smart metering, security, medical and agricultural electronics.

Distributors and the Santa Rita cluster

Karimex · Anatec · ATIVA · Multcomercial · Baltec

Vale da Eletrônica, Santa Rita do Sapucaí: roughly 150 electronics companies with R$ 3.2B in combined revenue, concentrated in telecom, metering and security. A single regional entry point to hundreds of design teams.

03 HOW WE HELP

We are your commercial and engineering team in Brazil.

Language, import complexity, certification and 40+ day lead times stall good products at the border. We remove all four.

Portfolio to market fit

We assess your full portfolio against real Brazilian demand, identify the families with the highest potential, and project the funnel each one can generate.

Direct access to buyers

We introduce your products to qualified EMS and OEM decision makers we already meet in person, not to a purchased contact list.

Technical support in Portuguese

Application engineering and commercial support in the local language and time zone, so your customer is never waiting twelve hours for an answer.

Samples, quotes and imports

We guide customers through sampling, pricing and the Brazilian import process, which is where most first orders are lost.

Local and consignment stock

Stock held in Brazil cuts the 40+ day ocean lead time that costs you designs against suppliers already sitting on the shelf.

Certification as a service

INMETRO and ANATEL homologation managed on your behalf, so regulatory approval stops being a reason to say no.

The ask: give us 3 part numbers and 90 days. We come back with a qualified opportunity, a named customer and a realistic volume, without the cost of a local office. If we do not, you have lost nothing.
